Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133).
- Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Specification

1. Applicant is reminded of the proper language and format for an abstract of the disclosure.

The abstract should be in narrative form and generally limited to a single paragraph on a separate sheet within the range of 50 to 150 words. It is important that the abstract not exceed 150 words in length since the space provided for the abstract on the computer tape used by the printer is limited. The form and legal phraseology often used in patent claims, such as "means" and "said," should be avoided. The abstract should describe the disclosure sufficiently to assist readers in deciding whether there is a need for consulting the full patent text for details.

The language should be clear and concise and should not repeat information given in the title. It should avoid using phrases which can be implied, such as, "The disclosure concerns," "The disclosure defined by this invention," "The disclosure describes," etc.

The abstract is more than 150 words.

Claim Rejections - 35 USC § 112

1. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

2. Claims 1-3 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

The claims appear to be drawn toward a subcombination between the apparatus and the subglass, entrance door of the ...driving room as set forth by the preamble "an apparatus for....". However, the body of the claims has language which seems to suggest a combination between the apparatus and the other structures. For example, claim 1 line 5 "a lower bracket which is attached to a lower portion of an inner surface of an entrance door...". The claims need to be corrected to reflect the subcombination thereof.

The claims are examined as best understood as a subcombination between the apparatus and the other structures, and the relationship between them being treated as subcombination. For example, claim 1 line 5 is treated as “ a lower bracket which is adapted to be attached....”.

Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

4. Claims 1-3 are rejected under 35 U.S.C. 102(b) as being anticipated by Struble (4015454).

Struble (figures 1-2, 5-7) shows an apparatus having a lower bracket (21) forming a groove which is upwardly opened, an upper bracket (19) which is downwardly opened, a locking apparatus (28) closely contacted with the upper bracket, a fixing member (38, 41, 42, 58), a handle (31) in which a rear end of the same is rotatably engaged to the fixing member, a support member (36) which is protruded from an inner surface of the handle and is integrally rotated with the handle, a handle limiting means (66) for limiting the rotation of the handle, a limiting rod which has one end axially engaged with the fixing member based on a rotation and axial direction movement and the other end engaged with the handle based on an axial direction movement for thereby rotatably fixing the handle to the fixing member based on a downward rotation in a limited angular range, a compression spring (67) which elastically supports the rod with respect to the fixing member and controls the axial direction movement of the rod so that

Art Unit: 3637

the engaging shoulder portion formed in the rod is inserted in the engaging groove of the fixing member at a maximum downward rotation angle of the limiting rod.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. The prior art shows different apparatus for covering an entrance.
